Introduction

Hotel Management System

This project is a desktop-based application developed using JavaFX, MySQL, and JDBC to automate hotel booking operations.

The system allows users to register, log in, and book rooms by selecting room type, plan, dates, and number of guests. It stores booking details securely in a database and generates a receipt after successful booking.

The system also provides email functionality to send booking confirmation and receipt to the user.

The main goal of this project is to provide a simple, efficient, and user-friendly hotel booking system that replaces manual processes.

Technologies Used

The project is developed using a combination of frontend, backend, and database technologies:

- JavaFX → Used for designing the graphical user interface (GUI)
- MySQL → Used for storing user and booking data
- JDBC → Used for connecting Java application with database
- Java (Core Java) → Used for application logic and functionality
- NetBeans IDE → Used for development and execution

Database Design

Database Structure & Design

The database is designed using MySQL with multiple tables to manage hotel operations efficiently:

- users table → Stores user details (name, email, password, phone)
- bookings table → Stores room booking information (room type, plan, dates, guests, total)

Key Features

- Each booking is linked with a user using **email**
- Structured data ensures easy storage and retrieval
- Supports real-time booking management
- Data is handled securely using JDBC

About

ABOUT GRAND PARADISE HOTEL

Swimming pool

Bar

Room Service

Internet

Breakfast

Tea & Coffee

Airport Shuttle

Restaurant

Spa

Our Swimming Pool provides a clean and refreshing space for relaxation, exercise, and recreation. It is maintained with proper hygiene and safety standards, making it ideal for both beginners and experienced swimmers.

The Gym & Yoga area is designed to promote a healthy and active lifestyle. Equipped with modern fitness machines and a peaceful yoga space, it helps members improve their strength, flexibility, and overall well-being.

The Banquet Hall is a spacious and elegant venue designed for hosting special events such as weddings, parties, meetings, and celebrations. With modern facilities and a comfortable atmosphere, it is perfect for creating memorable moments.

Our Game Zone is a fun and exciting place where people of all ages can enjoy different games and activities. It offers a variety of indoor games that help visitors relax, have fun, and spend quality time with friends and family in an energetic environment.

Modules of Project of about page

The About Page module of the Hotel Management System provides users with detailed information about the hotel, including its facilities, services, and environment.

It displays the hotel name, logo, and an attractive banner to create a strong first impression.

The module showcases key amenities such as the swimming pool, banquet hall, gym & yoga area, and game zone with images and descriptions.

It presents services like room service, restaurant, internet, spa, and airport shuttle through icons for quick understanding.

The layout is designed in a structured and visually appealing way, ensuring easy navigation and a better user experience.

This module helps users understand the hotel's offerings and enhances their confidence in choosing the hotel.

Modules of Project of Room Booking

The Room Booking module of the Hotel Management System allows customers to reserve rooms by entering details such as name, email, phone number, room type, number of guests, check-in date, and check-out date.

The module helps manage room reservations efficiently and ensures smooth booking operations.

It also validates customer information, stores booking details in the database, and provides an easy-to-use interface for users to book rooms conveniently.

Why choose this room?

✓ Spacious Interior

✓ Sea View

✓ Free WiFi

✓ 24/7 Support

Modules of Project of Room Details

The Room Details module displays complete information about a selected room, including images, description, amenities, and ratings.

It shows pricing options such as non-refundable and free cancellation plans.

The module provides booking details like guests, check-in, and check-out dates.

It also includes a “Book Now” option to proceed with reservation easily.

Modules of Project of Booking Summary Page

The Booking Summary module provides a complete overview of the selected room and booking details before final confirmation.

It displays information such as room type, plan, price per night, number of guests, and stay dates.

The module calculates and shows the total cost clearly.

It also includes a “Confirm Booking” button to proceed with the final reservation

Modules of Project of Final Booking Page

The Final Booking module confirms that a room has been successfully booked after the booking process.

It displays a “Booking Confirmed!” message to reassure the user.

The module provides a simple and user-friendly interface with instant feedback.

It also includes a “Go to Home” option for easy navigation.

Modules of Project of Booking Information module

The Booking Information module displays complete details of the user's reservation such as room type, plan, number of guests, check-in and check-out dates, and total amount.

It provides a clear summary of the booking for user reference.

The module includes a "Download Receipt" option for saving booking details.

It ensures transparency and helps users keep a record of their reservation.

PAGE 1: LOGIN

Modules of Project of login page

The Login Page module of the Hotel Management System provides secure access for users and administrators.

It allows users to log in with their email and password, while new users can register through the Sign Up option.

The module validates user input, verifies login details using the database, and manages user sessions after successful login.

It also includes error handling for invalid login attempts and navigation features like the Back button.

The attractive hotel-themed interface improves the user experience.

Modules of Project of The Sign Up page

The Sign Up module of the Hotel Management System allows new users to create an account by entering details such as full name, email, password, mobile number, address, and role.

It validates user information, confirms passwords, and stores registration details securely in the database.

The module also includes terms and conditions acceptance and helps provide secure and easy user registration for accessing hotel services.

PAGE 5: ALBUM

Modules of Album Page

The Album module of the Hotel Management System is used to display images of hotel rooms, facilities, dining areas, swimming pools, gyms, and other services.

It helps customers visually explore the hotel environment before booking a room.

The module provides an attractive and organized layout for viewing hotel images and improves user experience by giving a clear overview of the hotel's amenities and infrastructure.
